DETAILED ACTION

Allowable Subject Matter

1. Claims 1-23 are allowed.
2. The following is an examiner's statement of reasons for allowance:

As noticed by the Applicants, Schull reference teaches an audible message waiting indication/indicator to be a stutter dial tone (an interrupted dial tone) that is presented to the user when user goes off-hook or telephone terminal in "transition" in order to inform that user of the telephone that there is a waiting message. Other references such as Moore et al. (U.S. Pat. #: 6,724,872), Olshansky et al. (U.S. Pat. #: 6,567,854), Maciejewski et al. (U.S. Pat. #: 6,219,414) and Crockett et al. (U.S. Pat. #: 6,775,357, 6,278,771 and 6,633,634) each teaches a system and method for delivery call waiting message with caller ID of an incoming call to off-hook called party in an established telephone call. It is noticed that the call waiting message indicator and message waiting indicator are different.

Therefore, the updated searches with all new found references and other cited references fails to clearly teach or fairly suggest the limitations of "sending, while said off-hook telephone is already participating in an established telephone call, a visual message waiting indicator signal from said central location and destined for off-hook telephone, said visual message waiting indicator signal including call related information relating to a caller who left said voicemail message, as substantially described and connected to the amended independent claims 1, 7,13 and 18.
